Uvod

- pomen matematike pri razumevanju fizike
- kaj je funkcija?
 - $f: A \rightarrow B$
 - $f: a \mapsto b, b = f(a)$
- graf funkcije f je množica urejenih parov (a, b) in je podmnožica kartezičnega produkta $A \times B$.
- fiziki funkcije uporabljamo kot zveze med količinami – ugotovljene z opazovanji (zakoni), izpeljane iz njih (izreki) ali definirane

give me 10 example of square root function in physics

Sure! Here are 10 examples where square root functions are used in physics:

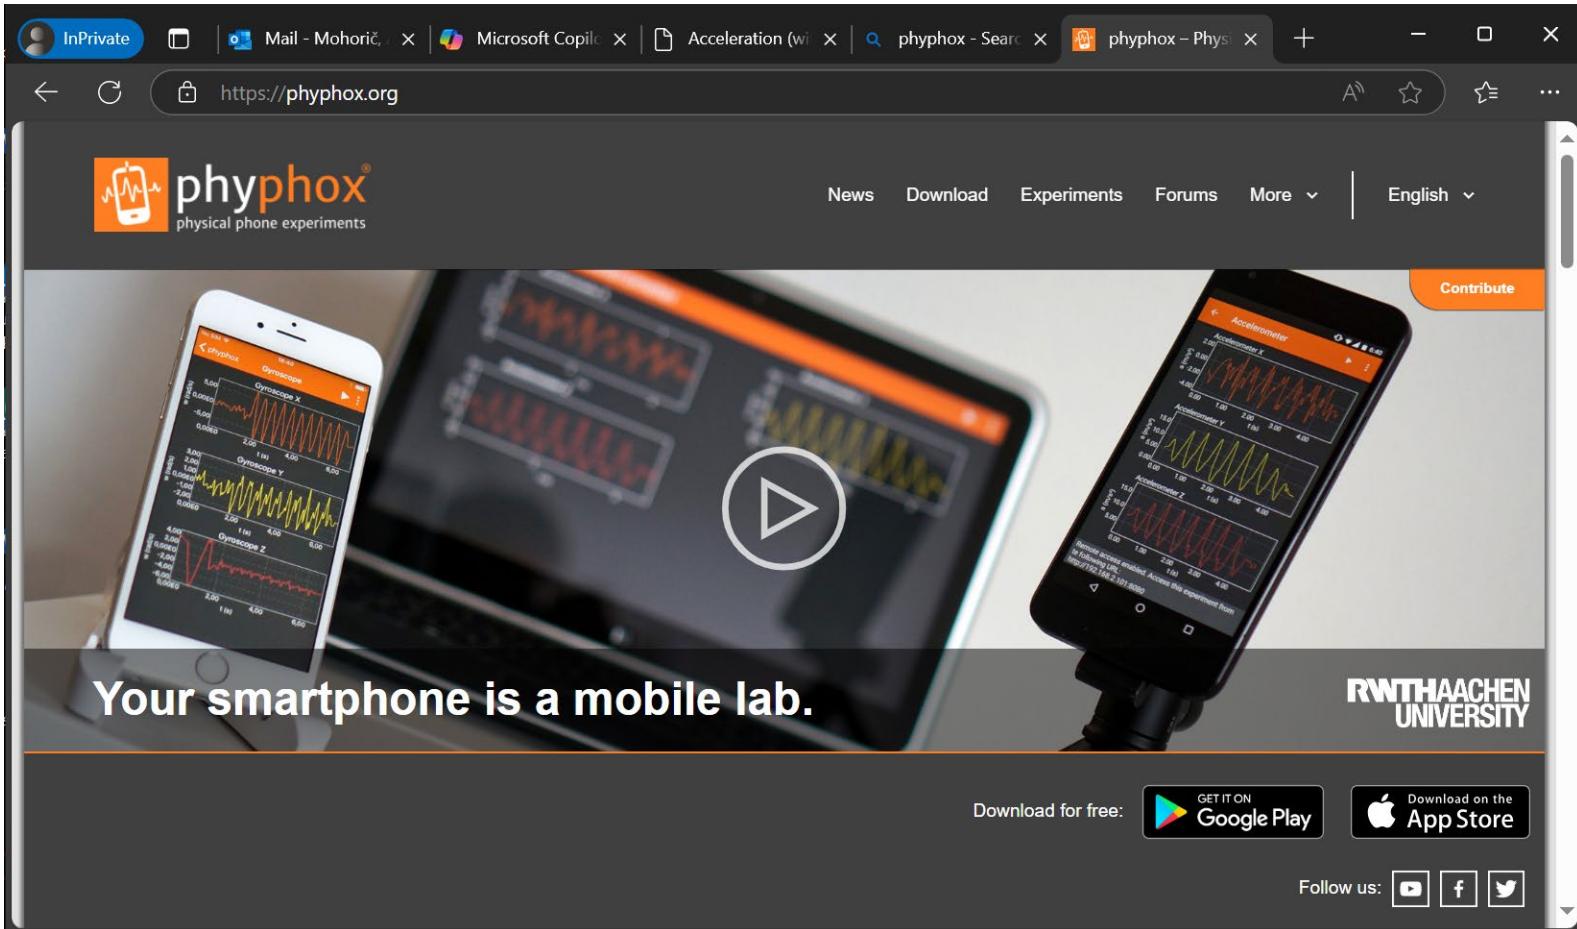

1. **Kinematic Equations:** Time of flight for an object under gravity, $t = \sqrt{\frac{2h}{g}}$.
2. **Wave Speed:** Speed of a wave on a string, $v = \sqrt{\frac{T}{\mu}}$ (where T is tension and μ is mass per unit length).
3. **Capacitance:** Energy stored in a capacitor, $E = \frac{1}{2}CV^2$, where $V = \sqrt{\frac{2E}{C}}$.
4. **Quantum Mechanics:** Energy levels of a hydrogen atom, $E_n = -\frac{13.6 \text{ eV}}{n^2}$, where n is an integer and involves square root calculations.
5. **Escape Velocity:** $v_e = \sqrt{\frac{2GM}{R}}$, where G is the gravitational constant, M is the mass of the planet, and R is the radius of the planet.
6. **Relativistic Time Dilation:** $t' = t \sqrt{1 - \frac{v^2}{c^2}}$, where t is the proper time, v is the velocity, and c is the speed of light.
7. **Doppler Effect:** Observed frequency, $f' = f \sqrt{\frac{1 + \frac{v}{c}}{1 - \frac{v}{c}}}$.
8. **Root Mean Square Velocity:** $v_{rms} = \sqrt{\frac{3k_B T}{m}}$, where k_B is Boltzmann's constant, T is the temperature, and m is the mass of a particle.
9. **Acoustic Impedance:** $Z = \sqrt{\rho B}$, where ρ is the density of the medium and B is the bulk modulus.
10. **LCR Circuit Resonance:** Resonant frequency, $f_0 = \frac{1}{2\pi} \sqrt{\frac{1}{LC}}$, where L is inductance and C is capacitance.
